

"Good fortune is what happens when opportunity meets with preparation." —Thomas Edison

Chris Pangburn, P.E., LEED AP

President

BIO

Chris enjoys helping his clients turn their visions into realities. Chris offers a wide range of creative expertise from small project design to large project delivery strategy and market positioning. Chris specializes in bringing the right people together for each opportunity. His experience and result oriented approach have been helping to redefine Denver's skyline for more than 15 years.

Prior to joining Redland Consulting Group, Inc. in 2008 he spent his 5 previous years growing a regional office for a national consulting firm.

PROJECT EXPERIENCE

Chris started his unique engineering career in the early 1990's when he began working in Lower Downtown Denver on the final phases of the Coors Field redevelopment project. As Coors Field neared completion, he began work on the next Denver redevelopment project; the Pepsi Center.

Over the next few years he honed his expertise on infill and redevelopment projects and spent six months in the French Quarter of New Orleans on the restoration of the National Park Service's Jean Lafitte Visitors Center. During this time he continued to work on complex infill projects which led to opportunities on municipal streetscapes, parks and recreation, education, hospital, commercial, industrial and athletic field projects.

In the early 2000's, Chris had the opportunity to work on the redevelopment of the 4,700 acre Stapleton Airport near the heart of Downtown Denver. He also worked on mountain projects, municipal projects, museums, an active adult community, resort projects beyond Colorado, the Denver Grand Prix and numerous other interesting projects. Chris' experience with nearly every type of civil engineering project combined with his leadership translates into proven preparation for today's clients.
